

MARAM Collaborative Practice Training

What is MARAM Collaborative Practice Training?

The MARAM Collaborative Practice training focuses on both collaborative practice and foundational aspects of MARAM that enable collaboration. The training enables practitioners to contribute to risk assessment and collaborate for ongoing risk management, through respectful and sensitive engagement with victim's survivors, information sharing, referral and secondary consultation.

Should I come to this training instead of the other MARAM training?

No. This is NOT risk assessment training. You will also need to attend other MARAM training relevant to your role. Organisations should be guided by Family Safety Victoria resources in determining the relevant roles, responsibilities, and training requirements for staff.

This training is not intended to provide risk assessment training but compliments other MARAM modules that are now available.

Who should come to this training?

The MARAM Collaborative Practice training is for those working in family services, housing services, mental health and alcohol and other drug services in the South -West region. Given the availability and interest in other MARAM training, the delivery of Collaborative Practice module is most suited to practitioners from Tiers 2, 3 and 4, as outlined in the Victorian Government [Responding to Family Violence Capability Framework \(2017\)](#). Organisations should be guided by Family Safety Victoria resources in determining the relevant roles, responsibilities and training requirements of their staff.
